

Green Origins

Gopher Goo was designed by a plant pathologist and fellow gardener, Heather Vallier, PhD. Dr. Vallier believes that her business should be as green as her garden. This is evident from the composition of the earth-friendly Goo family of products, to her product packaging and shipping materials. Giving back to her community is also a priority, as reflected in the donation of Goo products to local schools.

Dr. Vallier holds a bachelor of science in plant pathology and biology, a master of science in plant pathology and molecular biology, and a doctorate in biological sciences with an emphasis in molecular plant pathology.

Dr. Vallier has a zero tolerance policy in her yard for gophers and is happily living and gardening, gopher free, in Cambria, California.

Visit www.gophergoo.com for more info on Gopher Goo, and to learn about new Garden Goo! For more information on Dr. Vallier, visit her web site at www.cropdoctor.net.

*Got a gopher?
Go for Goo!*

The Green Gopher Solution

Gopher Goo®

Earth Friendly • Fully Biodegradable

100% Green Gopher Control

Patent Pending 2010

FIRST CLASS

Your Green Garden Solution

Gopher Goo is your green solution in your battle against the destructive beast that threatens your lawn and garden!

As a fellow gardener, you probably share our frustration of seeing the dreaded mounds of soil in your manicured lawn, or at losing cherished plants to a gopher's root chewing.

Gophers are aggressive, invasive plant killers. **Gopher Goo** offers an ecological answer that is also child and pet friendly.

In addition to the pest-defense benefits of **Gopher Goo**, it is also loaded with ingredients that nourish your lawn and plants. It protects your plants while driving the beast from your yard in a safe and natural way.

Gopher Goo is good for the garden, bad for the beast!

100% Green Gopher Control

Gopher Goo is a completely non-toxic starch-based granular powder that is the GREEN gopher solution requiring no poisons or dangerous traps. It eliminates gophers from your yard, filling the holes and burrows they leave behind while saving precious water too!

Gopher Goo is an ultra absorbant starch material mixed with fertilizers and nutrients. When combined with water, it expands 3-500 times, filling gopher burrows with a sticky, gelatinous solid, driving the beasts from your yard.

*Good for the garden
bad for the beast!*

Earth Friendly Biodegradable

As **Gopher Goo** absorbs the water, it will expand and harden into a strong gel material which will break down naturally in your yard in about a year, feeding your plants all the while.

It is completely ecological and safe for your kids and pets; no gloves or special protection or tools are needed. **Gopher Goo** has the added benefit of plugging and sealing the hole, eliminating water loss. No more burrows to deal with, no more lost water down the hole, or plants drying out because of the burrows. And even if you don't catch the gopher, you've made his day a whole lot harder. He has to start over and you get to rest easy with very little effort on your part!

Gopher Goo saves water and protects the plants while excluding the gophers, or at least making the gopher work a lot harder. The free lunch is over!
